

Husky Injection Molding Systems, Bolton, Ontario

## BUY GREEN. BE SEEN.

Green Power from OPG Evergreen™ Energy powers more than just your industrial facilities. Green Power is low-environmental-impact electricity generated from renewable resources including wind, solar, low-impact hydroelectric developments and biomass energy. It's good for business and good for the planet. Organizations such as Husky Injection Molding Systems, a global supplier of injection molding systems to the plastics industry, and FAG Bearings Limited Canada, one of the country's leading manufacturers of ball and roller bearings for automotive, aerospace and industrial applications, understand that buying 'Green' brands them as environmentally responsible, and fuels their image as industry leaders.
