

Up in the air over oil filtration?

The ASL series of electrostatic filtration systems are the real world solution to "cleaner than new oil" in demanding electrical utility and other applications. Designed to provide sub-micron filtration on a 24/7 basis, these systems make equipment breakdowns due to oil contamination, tars, varnish and coking, a thing of the past. Over 3500 ASL electrostatic systems are providing ultra-clean oil to ISO 10/7/0 levels with typical operating expenses of less than 4 cents per hour. Inquire about our on-site trial program for your demanding filtration application.
