

TrackFlow is a Alberta-based company specializing in the movement of data from one point to another in "Real-Time".

The Trackflow Systems

- Tracks your production (Reports, Graphs, Historical)
- Provides automated process alarms
 - Sent via email and/or pagers
 - Operate and control devices remotely through the Internet
- SCADA turnkey system
- Provides actual electronic data from the field for end-user manipulation
- Allows for remote control of process parameters analysis:
 - Historical and trend analysis
 - Spot market and pricing analysis
 - Forward Curve Information

We save energy →
Our clients money \$

By reducing or smoothing system load, utilizing and optimizing off peak power otherwise effectively wasted.

Average savings per client is

18%-37%

of cost of power

Trackflow custom load shedding/shaping system helps customers optimize energy usage, and save money

How Does The Trackflow System work?

- Information is taken directly from the field gathering units and at predetermined intervals sent to a secure Internet Site.
- Authorized Users then access the information directly through the Internet.
- Reporting, graphing, trend analysis can be done directly on the TrackFlow Internet Site.
- Data can be exported from the TrackFlow site to your PC and then used for further analysis or even imported to your internal applications.
