

SUBSTATION AND POWER PLANT COMMISSIONING GROUP

The High Desert Power Plant in Victorville, CA was recently awarded the title of "Power Plant of the Year". Magna Electric's involvement in this project included the setup and vacuum oil filling of all Power and GSU transformers, testing and commissioning of the switchyard, SF6 breakers, and all relaying, distribution and control systems. Our overall commitment to teamwork, quality, and professionalism on this project resulted in the successful completion two months ahead of schedule.
