

All the Tools You Need!

From Autodaptive® controls to traditional, digital controls, Beckwith Electric has all the tools you need to manage Volts and VArS—easily accommodating your DA, SCADA or DMS system requirements.

- Autodaptive® controls adjust their own operating parameters based on dynamic system changes—it's automation in its highest form
- Easily-implemented solutions reward you with savings in operation, maintenance and decreased losses, as well as initial cost
- Fast and easy configuration of digital controls with data logging capabilities benefit field and operations personnel, as well as the system planner

Beckwith Systems Engineering

Your needs extend beyond simple equipment supply. Beckwith Systems Engineering (BSE) can help by providing a value-added scope including:

Training— At your facility or ours, training in system protection, reactive control, excitation systems, power quality systems and more.

Services— Studies for bulk and industrial power systems; testing and commissioning for BSE System Solutions.

System Solutions— Protection and control panels—new and retrofit, as well as excitation systems and voltage VAr/power quality correction systems.

Request our BSE Capabilities Brochure to discover how we can help you with your power electrical projects.

Exceeding Expectations Since 1967
